Software Solutions that Optimize Athlete Health Management

Software Solutions that Optimize Athlete Health Management

For more than two decades, Presagia has offered sports and health organizations software solutions that enable the fusion of health and performance. Presagia Sports is a secure multi-sport electronic health record that centralizes athlete health information and streamlines injury management and treatment processes. Fully web-based, users gain anytime, anywhere access to the information, communication tools, and reporting they need to optimize athletes' health and in doing so enhance their competitive status.

In short, customers:

- Centralize athlete health information in a secure database
- Gain anytime, anywhere access via the Internet
- Streamline injury management and treatment processes
- Monitor, measure, and analyze athlete health
- Enhance athletic performance through best-practice health management

Multi-Sport Electronic Health Record

At the core of Presagia Sports is a comprehensive Athlete Electronic Health Record (EHR) that facilitates best-practice by centrally capturing complete athlete health data. The medical team can easily enter, manage and share important information anywhere, anytime, promoting more informed medical decisions and enhancing injury management and treatment processes.

Communication and Task Management Features

Integrated communication and task management features promote collaboration among all personnel involved in athlete health management. Users can send critical health information in real-time with the secure internal messaging and notifications system. As well, they can easily manage tasks via an easy-to-use task management system and schedule appointments using Presagia's integrated scheduler.

Sophisticated Reporting Engine

Presagia Sports' sophisticated reporting engine supports in-depth analysis of athlete health data. Its extensive data-mining capabilities enable the creation of reports that can be used to monitor risk, identify trends, measure outcomes, streamline treatment processes, and develop proactive injury prevention strategies.

Secure Online Database

Presagia understands the importance of information security and utilizes best-practices to protect customers' data. Presagia Sports' role- and group-based security model enables customers to fine-tune each user's access rights and permissions so that they only see information for which they are authorized. Recognizing that the physical security of servers is equally important, Presagia hosts its systems in a SAS 70 audited facility utilizing the latest methods to keep data confidential.

Highly Configurable

The configurability of Presagia Sports allows sports organizations of all types to tailor it to their unique requirements. A few of the configuration options available through Presagia's Professional Services include screen layouts, custom charts and medical records, workflow automation, document templates, and dashboards.

Schedule a demo today to learn how Presagia Sports can provide you with a competitive edge!

PRESAGIA Sports

Presagia provides secure web-based health management software solutions used by athletics organizations worldwide. Our multi-sport athlete EHR and injury management system centralizes information needed by athletic trainers, physicians, coaches and physiotherapists, streamlines data entry to speed up the capture of treatment records, and includes real-time reporting and collaboration tools.
