

## ***Providing Ripon Medical Center with Instant Access to a Centralized Health Database***

### **The Customer**

Ripon Medical Center is a non-profit medical center founded in 1936 as a small rural family practice. With revenue of \$500,000 per year, it provides a range of professional healthcare services to over 25,000 people in Wisconsin. At the core of the services is the rehabilitation and management of more than 2,300 cases involving injured athletes. Ripon Medical carefully manages every detail of these cases through comprehensive records detailing everything from the initial examination through to the full recovery, to get athletes back to what they do best faster.

### **The Challenge**

As the deadline for HIPAA compliance approached and maintaining manual paper records was becoming too cumbersome, Ripon Medical Center needed a better way to manage athlete health information. It required a secure system that would meet HIPAA requirements, and support their continually expanding athlete client base. Additionally, the mobility of the Ripon staff demanded a system in which medical data could be accessed and edited on-site, off-site, and with or without Internet access. According to Sports Medicine Coordinator, Chris Schattschneider, the medical staff at Ripon needed, *"instant access to critical patient and athlete health, demographic and emergency contact information, including all related medical and prescription data."* So, Ripon Medical embarked on a search for a web-based solution that would provide the security and scalability it needed, while also recognizing the demand for critical health information to be stored centrally, but accessed securely from multiple locations.

### **The Solution**

Presagia Sports™ simplifies athlete health management through a comprehensive suite of web-based tools that standardize data capture, while centralizing processes, information and documents typically scattered across disparate systems and physically dispersed teams. Accessible anywhere at anytime through a highly configurable, intuitive interface, Presagia Sports™ is a HIPAA compliant solution that ensures data integrity and personal privacy by providing multiple levels of permission-based access.

Additionally, information within the system can be automatically pulled into pre-defined reports, such as physical evaluation and referral forms, thereby eliminating tedious paperwork and streamlining workflow to improve health management.

- Use a logical, efficient, and easy-to-use interface
- Gain instant access to information anywhere, at anytime
- Standardize data entry to remove human errors and inconsistencies
- Auto-populate forms to end time consuming and redundant data entry
- Find strategic information quickly and efficiently through filtered reports
- Identify injury trends to develop best practices and to prevent reoccurrences
- Eliminate paper records by digitally capturing all information in a secure centralized database

## The Result

Since its implementation, Ripon Medical Center has been reaping the benefits of a centralized database, giving users the access they need when they need it, and automating tedious tasks that previously involved hours of paperwork. Presagia Sports™ has sped up Ripon's medical decision-making process.

***“The implementation of Presagia Sports™ was about saving time and money, and offering our patients and athletes improved medical response time and more effective patient care services, in the office as well as on the field. By providing our people with the necessary tools to generate critical historical data with real-time injury and patient status reports, they will have access to critical decision metrics. We will effectively empower our people to make better and more informed decisions, quicker.”***

— Chris Schattschneider

Presagia Sports™ has connected users together in real-time, empowering them to make informed medical decisions. Chris Schattschneider states that it “will ensure that our people are always making informed decisions based on accurate up-to-the-minute data, including time-stamped SOAP notes with attached documentation at any time, from anywhere in the world.”
